An Internal Combustion Engine (IC Engine) is a type of combustion engine that converts chemical energy into thermal energy, to produce useful mechanical work. In an IC engine, combustion chamber is an integral part of the working fluid circuit. Principle of operation: Air-fuel mixture in the
combustion chamber (inside the cylinder) is ignited, either by a spark plug (in case of Spark Ignition ...

Internal Combustion Engine - Introduction and Types ...
An internal combustion engine (ICE) is a heat engine in which the combustion of a fuel occurs with an oxidizer (usually
air) in a combustion chamber that is an integral part of the working fluid flow circuit. In an internal combustion engine, the expansion of the high-temperature and high-pressure gases produced by combustion applies direct force to some component of the engine.
